ANNOUNCING THE LATEST CANADIAN MEDICAL MOBILE APPS FOR FAMILY PHYSICIANS

In the last five years, Dr. Chi-Ming Chow and his team have worked with a number of leading Canadian medical organizations to develop a series of medical applications that facilitate the adoption of their recommendations and guidelines. These medical applications are very useful for busy primary care physicians in their day-to-day clinical practice.

1) Canadian Cardiovascular Society - iCCS (iOS & Android)

Now the app is completely integrated with the 5 most popular CCS guidelines (lipids, drive & fly, A-fib, heart failure, antiplatelets). This is a one-stop shop for the cardiovascular guidelines in managing your patients.

2) Canadian Diabetes Association – guidelines.diabetes.ca & CDA CPG App (iOS & Android)

This is the most comprehensive site for patient-centred diabetes care and chronic disease management. The site and the app have many useful interactive tools to help with managing patients with diabetes.

3) Choosing Wisely Canada (iOS & Android)

This program helps Canadian family physicians choose the right tests for patients. The strength of this bilingual app is its searchability. All recommendations and patient pamphlets have been categorized by keywords for ease of use and efficiency. For example, you can easily look up specific recommendations and patient pamphlets regarding a specific test e.g. ECG, or a condition, e.g. back pain.
